PADUR, CHENNAI - 603 103**

**BONAFIDE CERTIFICATE**

Certified that this project report titled “**ASSISTIVE EXOSKELETON FOR ELDERLY**” is the bonafide work of “**P.V.N.S. SATHWIK (15127001), D. JASWANTH (15127032), D. MAHESH (15127064), D. VISHNU VARDHAN (15127066)**” who carried out the design project work under my supervision. Certified further that to the best of my knowledge the work reported here does not form part of any other project / research work on the basis of which a degree or award was conferred on an earlier occasion on this or any other candidate.

**HEAD OF THE DEPARTMENT**

**Dr. RAVI KUMAR SOLOMON,**

Professor and Head

Department of Mechanical Engineering

Hindustan Institute of Technology

and Science, Padur.

**SUPERVISOR**

**Dr. M.M. RAMYA,**

Professor

Center for Automation and Robotics

Hindustan Institute of Technology

and Science, Padur.

The Design Project Viva-Voce Examination is held on \_\_\_\_\_

**INTERNAL EXAMINER**

**EXTERNAL EXAMINER**

## ACKNOWLEDGEMENT

First and foremost, we would like to thank the Lord Almighty for His presence and immense blessings throughout the project work.

We would like to thank our internal guide **Dr. M.M. Ramya**, Center for Automation and Robotics for continually guiding and actively participating in our project, giving valuable suggestions to complete the project work.

We wish to express our heartfelt gratitude to **Dr. G. Ravikumar Solomon**, Head, Department of Mechanical Engineering for much of his valuable support encouragement in carrying out this work.

It's a matter of pride and privilege for us to express our deep gratitude to the management of HITS for providing us the necessary facilities and support.

We are highly elated in expressing our sincere and abundant respect to the Vice Chancellor Prof. **(Dr.) Kuncheria P. Issac** for giving me this opportunity to bring out and implement our ideas in this project.

We would like to thank all the technical and teaching staff of the Mechanical Engineering Department, who extended directly or indirectly all support.

Last, but not the least, we are deeply indebted to our parents who have been the greatest support while we worked day and night for the project to make it a success.

## **ABSTRACT**

Exoskeletons are wearable robots that are created to assist the human body or increase the muscular power of the wearer. Depending on the situation they may be used to protect soldiers and construction workers, aid the survival of people in dangerous environments, or assist patients in rehabilitation. According to a study on gait in older adults, at age of 60, 85% of seniors have normal gait and this proportion drops to 18% by age 85. Usually gait problems in adults is due to two major reasons, one is the depletion of calcium in bones due to ageing and other is due to sudden increase in weight of the adult which is termed as obesity. A study shows that the percentage of older people with obesity in India will increase from 7.5% to 21 % by 2050. This project centres to the design of an assistive exoskeleton for elderly people. The exoskeleton is designed and tested for its structural strength by carrying static structural analysis in Ansys workbench. Modal analysis is done to find the mode frequency of the exoskeleton in Ansys workbench.

Regardless of the application there are strict requirements for designing and producing exoskeleton suites. They must be durable but light weight and flexible, have reliable power control. The exoskeleton needs to be designed with natural and intuitive interface to be a true extension of human body. The exoskeleton should be designed to be self-sufficient between energy system recharge. Last but not the least, the exoskeleton should be comfortable and safe to wear. In this project we are trying to develop an exoskeleton which assists old people those who find it difficult to sit-stand and walk.

# TABLE OF CONTENTS

CHAPTER NO.	TITLE	PAGE NO.
	<b>ABSTRACT</b>	<b>iv</b>
	<b>LIST OF TABLES</b>	<b>viii</b>
	<b>LIST OF FIGURES</b>	<b>ix</b>
<b>1</b>	<b>INTRODUCTION</b>	<b>1</b>
1.1	PROBLEM DEFINITION	2
1.2	WEARABLE ROBOTS AND EXOSKELETONS	
1.3	IMPORTANCE OF GAIT	3
1.4	POWERED EXOSKELETON	
	<i>1.4.1 Gait velocity</i>	4
	<i>1.4.2 Cadence</i>	5
	<i>1.4.3 Double stance time</i>	5
	<i>1.4.4 Walking posture</i>	5
	<i>1.4.5 Joint motion</i>	5
<b>2</b>	<b>LITERATURE SURVEY</b>	<b>6</b>
2.1	Exoskeleton Design requirements	7
	<i>2.1.1 Age group and Anthropometric data</i>	8
2.2	SELECTION OF MATERIAL	9
